Box IV TEXT OF THE ABSTRACT (Continuation of Item 5 of the first sheet)

The technical features mentioned in the abstract do not include a reference sign between parentheses (PCT Rule 8.1(d)).

NEW ABSTRACT

A confocal optical device (10) is described. The device includes a tri-axial scanning mirror (48a) that can provide for three-dimensional scanning of objects. In particular, the scanning mirror (48a) has a deformable reflective membrane (48h) mounted on two annular gimbaled members (48c, 48d) to provide for rotation about two orthogonal axes. The deformable membrane, which can be provided at other suitable locations in the device, is used to control the focusing spot of the light beam transmitted from the device to the object being scanned. Various methods relating to the confocal optical device are also described.
